

Steps for Pulling a Hoover's Report in D&B Market Insight:

(Note: To Access this functionality you must have a Hoover's subscription and your Market Insight needs to be configured.)

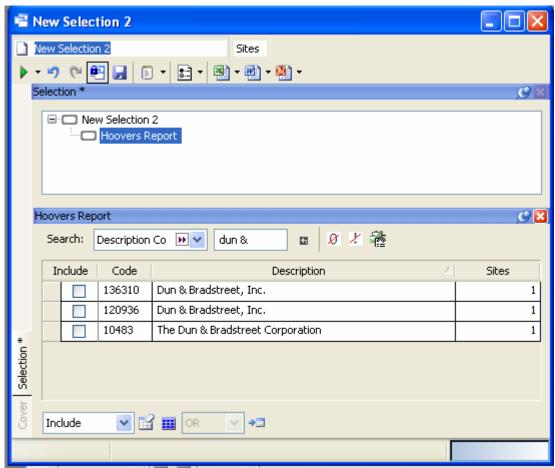

🖃 🧀 Hoovers Reports

Step 1: Drag and drop the Hoover's variable onto a selection

Step 2: Begin typing in the Business Name you are searching for. In this example, I'll use Dun & Bradstreet.

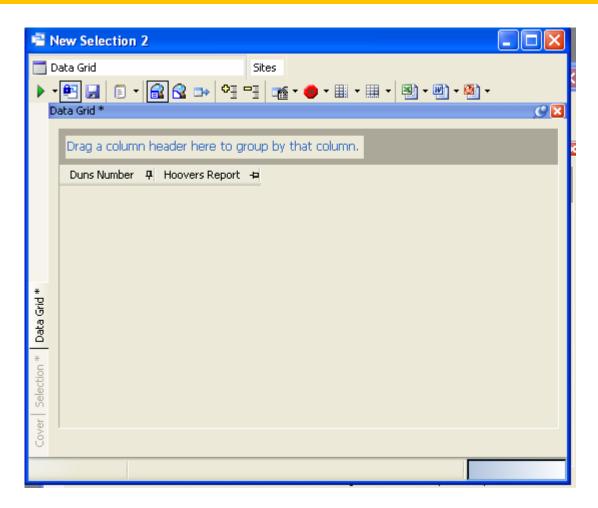

Notice that there are multiple options. As you type, the number of records that match will change. In this case, when I typed just Dun, I only got the first two records back, once I added the "&" I got the third record back.

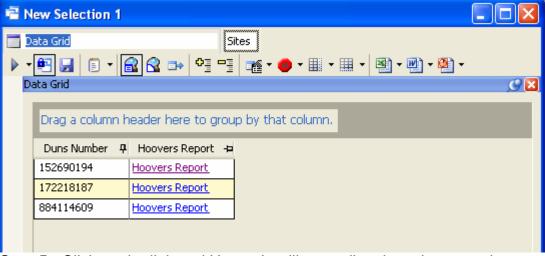

I'll select all three.

Step 3: Drag a data grid on top of the selection and add the Hoover's Report variable to the data grid.

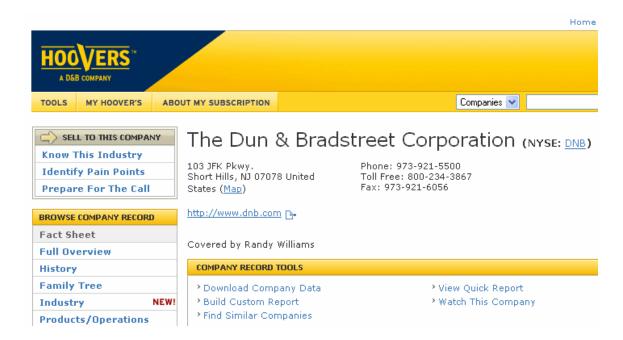

Step 4: Execute the build and you will now have live links to each of the three records in Hoover's.

Step 5: Click on the link and Hoover's will open directly to that record.

Note: You need to find the business first in your selection, rather than just adding the Hoover's Report variable to your data grid. If you just add the variable to your data grid, you will get what looks like a live link for each record, but in reality there will only be Hoover's records for 41,795 records.
