

How to Work with the Statistics Dialog Box

A Cube with a number of statistics added to it will show in the dialog box as follows:

Name: The description of the statistic

Format: How the figures from that statistic will be displayed (select from the drop down list)

Primary?: Thematic shading will apply to the figures of which ever statistic has been checked

The following columns are improvements to the dialog box:

Display: Checking or unchecking these boxes will display or hide that statistics column. In addition, the statistics in the hidden column(s) will be still available and active in the Cube. This can be useful for hiding results of interim calculations or just showing some of the statistics that have been calculated.

Edit...: Clicking on this button will open the relevant statistic for editing. Previously this was a small button indicated by ... at the beginning of each statistic row

Delete: Previously you could only hide statistics that had been added to a Cube. Clicking on this button will open a confirmation window which will allow you to permanently delete the relevant statistic
